

Marketing Draft

Launch-ready copy and rough visual mockups

Founding 100

21-day beta

Non-clinical

1 Message hierarchy

Audience	Structured, self-coached recreational lifters who already log training and use a wearable or recovery input.
Tension	The wearable gives a score and the programme gives a target, but neither makes the session decision in context.
Promise	One explainable Progress / Repeat / Reduce / Defer proposal using the block, last comparable work and recovery trend.
Trust proof	Evidence, confidence, gaps and counterfactual are visible; nothing changes until the athlete approves.
CTA	Apply for the Founding 100 Beta.

2 Hook-driven ad copy

2.1 Primary

Your wearable gives you a score. Your programme gives you a target. Training Ledger shows what to do today—and why.

Join the Founding 100 Beta

2.2 Alternative

Stop turning readiness scores into guesswork. Progress, repeat, reduce or defer—with evidence you approve.

Apply for 21-day beta access

Recommended placement: primary copy for coach/creator posts and landing-page hero; alternative for short vertical video and carousel cover. Avoid “optimises recovery,” “prevents injury” or autonomous-coach language.

3 Rough visual mockup — social ad

Production note: use a 1080 × 1350 vertical layout. Keep the evidence card legible; do not lead with a robot, brain graphic or generic athlete stock photo. Use product tension as the hero visual.

4 Launch email

Subject	Your readiness score is not a training decision
Preview	Turn your block, last session and recovery trend into one explainable call before you lift.

You planned the session. Your wearable gave you a score. But the hard question is still yours: progress, repeat, reduce—or defer the hard top set?

Training Ledger brings your block goal, last comparable sets and personal recovery trend into one evidence card. It shows the gaps, confidence and what would change the recommendation. Nothing changes until you approve it.

We are opening **100 Ireland-first beta places** for structured lifters. The 21-day Decision Sprint is free and does not require a card. Bring one active block and three planned sessions; we will help you test whether the decision is genuinely useful.

APPLY FOR THE FOUNDING 100 BETA

PS: This is non-clinical training decision support, not injury or medical advice.

5 Rough visual mockup — launch email

6 Deployment checklist

Landing page	Use the primary hook, one product-tension visual, three trust points and one application CTA.
Partner post	Creator demonstrates a real decision conflict; includes redacted evidence and states that the athlete approves.
Short video	0–3s: score vs plan; 3–15s: evidence card; 15–25s: counterfactual and approval; final CTA.
Email test	A/B subject: “Your readiness score is not a training decision” vs “The missing step between recovery and today’s session”.
Attribution	Partner code + UTM source; track application, context-ready snapshot, proposal two, outcome and paid offer.
Guardrail	No diagnosis, injury prediction, recovery optimisation or guaranteed-performance claims.
